

Kurt Lemond Capatan

Senior Android Engineer

kurtlemond@gmail.com • linkedin.com/in/kurtlemond • Canadian Citizen
Toronto, ON • Eastern Time • Open to Remote

Senior Android engineer with 9 years of Android experience building apps for banking, health, fitness and retail brands, including a Big Five Canadian Bank, Victoria's Secret and iFIT. Strong in Jetpack Compose, multi-module architecture and CI/CD, with experience leading a pod's Android team and writing technical design docs for Android leads and architects. Recently shipped two Flutter apps with AI coding agents like Claude Code.

Skills

- **Android:** Android SDK, Material Design, REST APIs, Kotlin, Java, Jetpack Compose, XML Views, Coroutines, Flow, RxJava, Hilt, Dagger 2, Room, WorkManager, Compose Navigation, Data Binding, Epoxy, TalkBack accessibility
 - **Architecture:** MVVM, MVI, Clean Architecture, multi-module apps, Gradle convention plugins, product flavors
 - **Networking:** Retrofit, OkHttp, Apollo GraphQL, Moshi, Gson
 - **Testing:** JUnit, MockK, Mockito, Robolectric, Espresso, JaCoCo
 - **CI/CD and monitoring:** Codemagic, fastlane, GitHub Actions, Firebase Crashlytics, App Distribution and Remote Config, Sentry, Amplitude, Google Play Console
 - **Cross-platform:** Flutter, Dart, Flame, BLoC, Riverpod, Supabase
 - **AI tools:** Claude Code, Cursor, GitHub Copilot, MCP
-

Experience

Lead Mobile Engineer, Android Platforms | Fueled Digital Media LLC | Remote | Feb 2026 - Oct 2026

- Shipped Kotlin releases of the Victoria's Secret Android library, fixing edge-to-edge insets and RecyclerView image flicker
- Shipped two cross-platform Flutter apps for Android and iOS: took one from API integration to client handover, and delivered features and releases on the other
- Set up shared AI rules, skills and MCP connections to Figma, Linear and Supabase, so every developer's AI agent follows the same architecture and Git conventions. Plan, build, test and review features with Claude Code and Cursor daily

Neelo Tablet App (Flutter and Flame)

- Redesigned game content delivery after a slow release: packed about 13,000 files into 21 zipped bundles on Supabase Storage, cutting a full QA download from 30+ minutes to about 4
- Resolved the client's recurring complaints about misplaced characters by finding and fixing how the game converted design coordinates to screen positions, and recorded a video guide for content authors
- Built live tuning panels and drag-and-drop edit modes in TestFlight builds, so designers could adjust gameplay without waiting for a new build
- Built the Achievements feature end to end: an offline-first badge catalog, a Supabase Edge Function rules engine, unlock toasts and Amplitude events

Care2Cure App (Flutter)

- Built an AI chat that streams answers in real time over Server-Sent Events, with article sources and in-app PDF viewing
 - Integrated backend authentication: sign-in, sign-up with email verification, password reset, JWT sessions with auto-logout, account deletion and deep links
-

Senior Android Developer | Accenture | Toronto, ON | Aug 2024 - Jan 2026

Big Five Canadian Bank

- Led Android for Loyalty & Rewards team and two offshore developers: assigned tickets, reviewed code, and relayed product and engineering decisions
- Wrote a technical design doc for each new feature and presented it to design review board of Android and iOS leads, engineering managers and architects
- Led the refactor of 25+ legacy XML screens across 5 flows to support rotation, tablets and foldables for Android 16, finishing in 4 sprints with QA regression testing
- Shipped Birthday Greeting as the pod's first feature under my lead, built an Airline loyalty points balance feature, and built the Compose screens and navigation for Pay-off Transaction
- Built TalkBack-accessible Compose UI and verified each screen with recorded walkthroughs

Senior Android Developer | Fueled Digital Media LLC | Remote | Feb 2021 - Oct 2023

NationsBenefits Android App

- Built more of the shared Jetpack Compose design system than anyone on the team, including text styles, theme colors, a global bottom sheet and a reusable form system
- Fixed Compose stability issues, such as unstable list and value-class parameters, so composables could skip recomposition, and added a CI report that flagged non-skippable composables on each pull request
- Built the checkout flow end to end with Apollo GraphQL, plus wallet balances, shop and cart
- As a code owner, improved the Android build: one shared Gradle setup for all modules, JaCoCo test coverage reports, and faster builds with KSP

Victoria's Secret Community Android Library

- Built the profile page, search, the Styles feed and style post creation for a plug-and-play community library inside the Victoria's Secret Android app

iFIT Android Tablet App

- Built dashboard sections with Epoxy and nested RecyclerViews, and a reusable Espresso library of custom matchers and view actions for nested lists, at iFIT's request for use across teams

Android Developer | Telna (formerly KnowRoaming) | Toronto, ON | Mar 2018 - Jan 2021

KnowRoaming Android App, as the sole Android developer of Telna's travel SIM app

- Migrated a legacy Java codebase to Kotlin, MVVM and Clean Architecture with Dagger 2, RxJava and Retrofit, one feature at a time while still shipping releases
- Restructured the project with Gradle product flavors
- Built airport notifications with WorkManager and location-checks that promoted data plans to travellers and reminded them to activate their plans abroad
- Owned Google Play releases and rollbacks end to end, and routed Crashlytics alerts to Slack

Android Developer (Contract) | IceMobile | Toronto, ON | Jan 2017 - Mar 2018

Air Miles Android App (now Blue Rewards)

- Led and shipped Save to Android Pay (now Google Wallet) with a 5-person team, after my one-week proof of concept showed the card-signing key had to stay on the server
- Built a curved shared element transition into the partner details page

Education

Bachelor of Science in Computer Engineering | Bulacan State University | Philippines | 2011 - 2015
